DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The prior art documents submitted by applicant in the Information Disclosure Statements filed on 07/21/2004 and 04/28/2005, have all been considered and made of record (note the attached copy of form PTO-1449).

Drawings

3. The drawings, filed on 07/21/2004, are accepted.

Specification

4. Applicants' cooperation is requested in correcting any errors of which applicants may become aware in the specification.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Kawanishi et al. (U.S. Patent 6,404,966).

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

With respect to claim 1, Kawanishi et al. (figures 3, 6 and 14) disclose a polarization-maintaining photonic crystal fiber comprising a core (A1); a clad layer (A3) surrounding the core (A1), the clad layer (A3) including a large number of thin holes extending along the axis of the fiber, the thin holes being arranged in a crystalline formation (see figure 3) and an overclad layer surrounding the clad layer (A3), wherein the overclad layer has a marking portion (A2) for indicating a polarization plane to be maintained (column 6, lines 17-33).

With respect to claim 2, Kawanishi et al. (column 6, lines 36-39) disclose the polarization-maintaining photonic crystal fiber, wherein the marking portion is made of a material having a refractive index different from that of the material of the overclad layer.

With respect to claim 3, Kawanishi et al. (column 6, lines 22-24) disclose the polarization-maintaining photonic crystal fiber, wherein the marking portion is a hole extending along the axis of the fiber.
